

## IBTPHEM position statement regarding access to the FIMC examination for LTFT PHEM trainees

The Board is committed to ensuring clarity regarding eligibility for the Fellowship in Immediate Medical Care (FIMC) examination of PHEM trainees undertaking less than full-time (LTFT) training. Flexibility must be balanced with equity for PHEM trainees undertaking full-time training and maintain alignment with the [subspecialty curriculum](#), which states that a trainee “*is eligible for the FIMC after completion of an indicative 11 months’ WTE training in PHEM and successful completion of the DIMC*”, “*towards the end of phase 2*” (i.e. a trainee must have progressed to phase 2 (consolidation) training before their application to sit the FIMC).

This statement should be read in conjunction with our guidance on [LTFT training in PHEM](#).

This statement applies to PHEM trainees appointed to subspecialty training during national recruitment from 2025 onwards. Any current LTFT trainees who were appointed before 2025 should seek clarification from their Educational Supervisor, who can liaise with the Training Programme Director if required.

### LTFT training implications for FIMC eligibility

The next four pages demonstrate (a) the implications of LTFT training on FIMC eligibility and (b) the relationship between the earliest eligible examination diet and the end of LTFT subspecialty training, in the contexts of scheme A, B or C training and/or posts commencing in August or February (where YYYY = the year of commencement of subspecialty training).

The Board **strongly recommends** combinations in which the first eligible examination diet falls during or within one calendar month of the end of subspecialty training.
